

We are proud to present you our new product - MEC PC casing!

The first one in series of our PC casing production is MEC FP-01-BK (a full profile standard ATX form factor case) followed by MEC LP-01-BK (a low profile mATX/mITX form factor case).

Both products come in black color (standard) and are manually painted by electrostatic method. Products can be ordered in white or silver color as well.

The first generation of our PC casings (both FP-01-BK and LP-01-BK) is designed for HTPC and Desktop PC usage and targets DIY (do-it-yourself) market as well as professional PC assemblers.

Our casings are carefully designed and their dimensions comply with Hi-Fi standards (emphasis on 19"/43cm width). It's overall look is robust and stylish with emphasis on minimalism as key point. Flawless overall finish provides ultimate satisfaction for users, combining aesthetics and practical nature of the product.

Both of our PC cases can be ordered with optional masks made of carbon fibre (black models only) or anodized aluminum.

Our whole production is based on manual labor so each and every product is handmade. Each and every casing's component is separately inspected and all products are manually assembled and packed.

Our goal was to achieve highest quality in production. For this very reason we are using materials and components with certified European origin exclusively.

Ecology and environment were also on our mind. Therefore, we are using only recycled/recyclable materials in our production as well as environmentally friendly methods of material treatment.
